

My name is Tanaya Sharma, I am in 3rd year environmental engineering. I came to the University of Regina from Vancouver, BC where I was born and raised. The position I am running for is Engineering Director. I believe I will be a good candidate because I am responsible and helpful, I enjoy helping students even if it's just proof reading their assignment. Being part of University of Regina Students Union will allow me to help students on a larger scale. I consider myself responsible because I am good at time management and well aware of prioritizing my time and attending meetings at given times.

I have never been the type to be part of committees or groups in my university life, ever since last year and I realized I really enjoy it I am currently part of RESS my position is Environmental REP, last semester I was also part of the environmental lab instructor hiring committee and this semester I also got chosen to be on the academic dean hiring committee for engineering. Being part of these committees has helped me in decision making and choosing in the best interest of the student's. I look forward to this opportunity serving as a engineering director if i get the chance.
